Topcon Positioning Group

Topcon is a leading manufacturer of precision measurement and 3D positioning technologies for the global BIM, surveying, civil engineering and construction markets. The company mission is the smart integration of information and technology to constantly improve productivity in order to create sustainable infrastructure.

One such solution, designed for HVAC and MEP contractors, includes the Topcon LN-100 Layout Navigator. The 3D BIM layout tool is a turnkey, layout solution that is easy-to-use and less than one-half of the cost of more complex robotic optical instruments currently available to contractors today. Just press the power button and the LN-100 self-levels and creates an entire zone of 3D positioning data. The LN-100 instrument was specifically designed in collaboration with Autodesk to integrate with Autodesk cloud services, providing model-based layout as a means to more easily connect the office with field-level execution.

The LN-100 offers a seamless integration with the Topcon MAGNET® suit of software solutions for a simplified workflow. Utilizing a private, cloud-based company account, MAGNET can quickly share data files to and from the office. Additionally, the MAGNET integration allows field workers to automatically document their site measurements directly from Topcon devices to AutoCAD 360, creating industry standard, sharable DWGs — directly impacting quality management and coordination capabilities.

Topcon is committed to providing advanced solutions to meet escalating information modeling and infrastructure needs worldwide. topconpositioning.com
