

Bracket Solutions

For the installation of electrical containment, piping, ductwork and other mechanical services

- Versatile
- Quick installation
- Safe & secure

The Next Level of Suspension

Gripple Bracket Solutions

You know Gripple for our Cable Hanger Kits - fast, versatile, and lightweight suspension methods for ductwork, piping, electrical services, and lighting. But continuous innovation has resulted in our newest product range. We're pleased to introduce: Gripple Bracket Solutions.

As a more versatile, engineered, and time-saving alternative to strut, Gripple's bracket systems make

it so much easier and faster for contractors to suspend and install their services.

Whether pre-fabricated or assembled on-site, or suspended with Gripple Cable Hangers or traditional threaded rod, the adjustability and compatibility of our brackets gives the contractor labor and logistics savings, from warehouse to installation.

Ready-to-Use Strut Replacement

Our brackets are universal by design. For suspending services, the strut profile is compatible with Gripple's UniGrip Cable Hangers and 'twist-on' accessories, as well as with threaded rod. The brackets come in a variety of ready-to-use lengths (no cutting required) so there is always a length to suit your suspension application.

Great for:

Any building type where services are suspended in various drop lengths from structure, or in single or double-tiered configurations.

**Bracket Compatibility
with Other Products**

Whether you're suspending with threaded rod, or using traditional clamps for piping & electrical applications, our brackets are seamlessly incorporated into these methods.

**Fast Trak® Bracket
& Track System**

The brackets can also be utilized as part of our unique Fast Trak system. Fast Trak includes two rigid tracks with the bracket. The tracks attach to the structure and easily allow the bracket to be vertically positioned anywhere along the tracks and locked in place. A trapeze suspension system can be installed in minutes.

Benefits

Versatility

Our brackets are the perfect suspension solution, whether you're assembling on-site or doing pre-fabrication off-site; or whether you're suspending them with Gripple UniGrip Cable Hangers, traditional rod, or as part of the Fast Trak system. They also give you the versatility to suspend in a trapeze configuration, from a single point, mounted to the wall, or seismically braced. And the profile of the brackets can be utilized on all 4 sides, allowing you to use both standard strut accessories as well as Gripple accessories, all at the same time.

Close to Deck Solutions

If your services will be suspended less than 5 ft from the deck, Fast Trak is your best option. The tracks allow you to easily and quickly position your suspension as close to the deck as you need to. Perfect in the case of high rise residential structures.

Fast Installation

Our ready-to-use bracket solutions provide you with a variety of bracket length and track length options, where no cutting to size is needed. Whether you're suspending the bracket as part of the Fast Trak system, with Gripple UniGrip Cable Hangers, or with traditional rod, a lot of time savings has already been achieved.

Safety

Out-of-the-box bracket lengths are ready to use, thus eliminating the need for on-site cutting, hot works permits, and risk of injury.

Logistics & Handling

Whether in a warehouse, on a truck, or on-site, stackable neat packaging that's easy to carry and transport means faster, safer, and more economical handling.

Approved to:

Gripple Bracket Solutions are suitable for suspension of Mechanical, Plumbing, and Electrical systems, and carry the following approvals:

- UL 2239
- ICC-ESR-4622
- IAPMO
- Fire tested by Exova to F120 and MPA to 1363-1

Technical Services

Gripple works with customers around the world to provide our suspension solutions as 2D CAD and 3D BIM models. In addition, the Gripple Technical Team provides complimentary Take Off services, ensuring that with little effort, your full project can be prepared for bidding.

Our technical services put our team at the heart of your project, handling the complicated elements of your project and ensuring proper quantity and placement of Gripple products based on the services being suspended.

Mechanical & Plumbing

HVAC – Ductwork

Rectangular ductwork can be easily suspended either with the Gripple Fast Trak system, or with a Gripple Universal Bracket paired with our UniGrip Cable Hangers or traditional threaded rod. Where duct is suspended particularly close to the structure, Fast Trak is the ideal option.

Suspension Methods

**Fast Trak + Vibration Dampener Pad (VDP)
Single tier**

**Fast Trak + Vibration Dampener Pad (VDP)
Multi-Tier**

Universal Bracket + UniGrip Cable Hangers

Universal Bracket + traditional threaded rod

Piping – Chiller Piping, Domestic Water, DWV (Drain, Waster, and Vent), Medical Gas

All types of piping can be easily suspended either with the Gripple Fast Trak system, or with a Gripple Universal Bracket paired with Gripple UniGrip Cable Hangers or traditional threaded rod. Our Quick Twist and GCS Clamps attach to our brackets and accommodate pipe diameters up to 9" O.D, making it easy to install runs of various sizes of piping with one product. Our brackets also accommodate traditional strut accessories.

VRF Systems

Similar to standard piping, VRF systems can be easily suspended either with the Gripple Fast Trak system, or with a Gripple Universal Bracket paired with Gripple UniGrip Cable Hangers or traditional threaded rod. Our Quick Twist Clamps attach to our brackets and accommodate pipe diameters up to 9" O.D steel, making it easy to install runs of various sizes of piping with one product. 1 or 2 line sets can also be accommodated with a single clamp. Our brackets also accommodate traditional strut accessories.

Electrical Support Systems

Conduit

Whether pre-fabbing or installing on-site, conduit can be easily suspended either with the Gripple Fast Trak system, or with a Gripple Universal Bracket paired with Gripple UniGrip Cable Hangers or traditional threaded rod. Our Quick Twist and GCS Clamps attach to our brackets with a quick quarter-turn, making it easy to install runs of conduit faster than before. Our brackets also accommodate traditional strut accessories.

**Fast Trak + Conduit Clamps
(traditional)**

Cable Basket

Cable Basket can be quickly suspended in a single or multi-tier configuration with the Gripple Fast Trak system. Or, if you prefer, it can also be suspended with a Gripple Universal Bracket paired with Gripple UniGrip Cable Hangers or traditional threaded rod. With either method, our CB Clips twist easily into the bracket, allowing a place for the cable basket to lock into.
